

PPO to Payor Connectivity

HeC's Universal Services have modernized the data capture process for many PPOs. Paper and electronic claims are aggregated and sent to you in one electronic pipeline to simplify your front-end operations. HeC now addresses the back-end challenges as well with our PPO to Payor Connectivity services. Most PPOs have dozens or hundreds of payor connections that must be supported, and HeC can manage these connections through either paper or EDI distribution.

Print Distribution

EDI connectivity is becoming more prevalent, but many of a PPO's payor clients do not produce enough volume to warrant EDI connectivity and support. Distribution of paper claims with reprice sheets is still common and can be the most labor intensive and costly aspect of the claims repricing process.

HeC's can remove the matching, checking, sorting and mailing processes from your mailroom. Simply deliver one electronic file to HeC, and we'll distribute all your repriced claims, paper or EDI, to your payor clients. HeC uses state of the art mail sorting, folding, and printing equipment to efficiently create outbound mail pieces to payors. Further, HeC's volume and aggregation techniques create huge postal discounts, all of which are passed on directly to the PPO.

EDI Distribution

HeC also has established electronic connectivity with many payors. You can leverage our connections or we can establish new trading partners for you. Also, HeC's processes are flexible and can accommodate "non-standard" requirements established by some of your payors.

Focus on your core competency as a PPO, network development and repricing, and let HeC unburden you from the front- and back-end hassles that accompany the repricing process. Whether it is paper or EDI that you need to distribute, HeC has the unique infrastructure in place to streamline your process.
